

MergerTree's Data Center Benefits

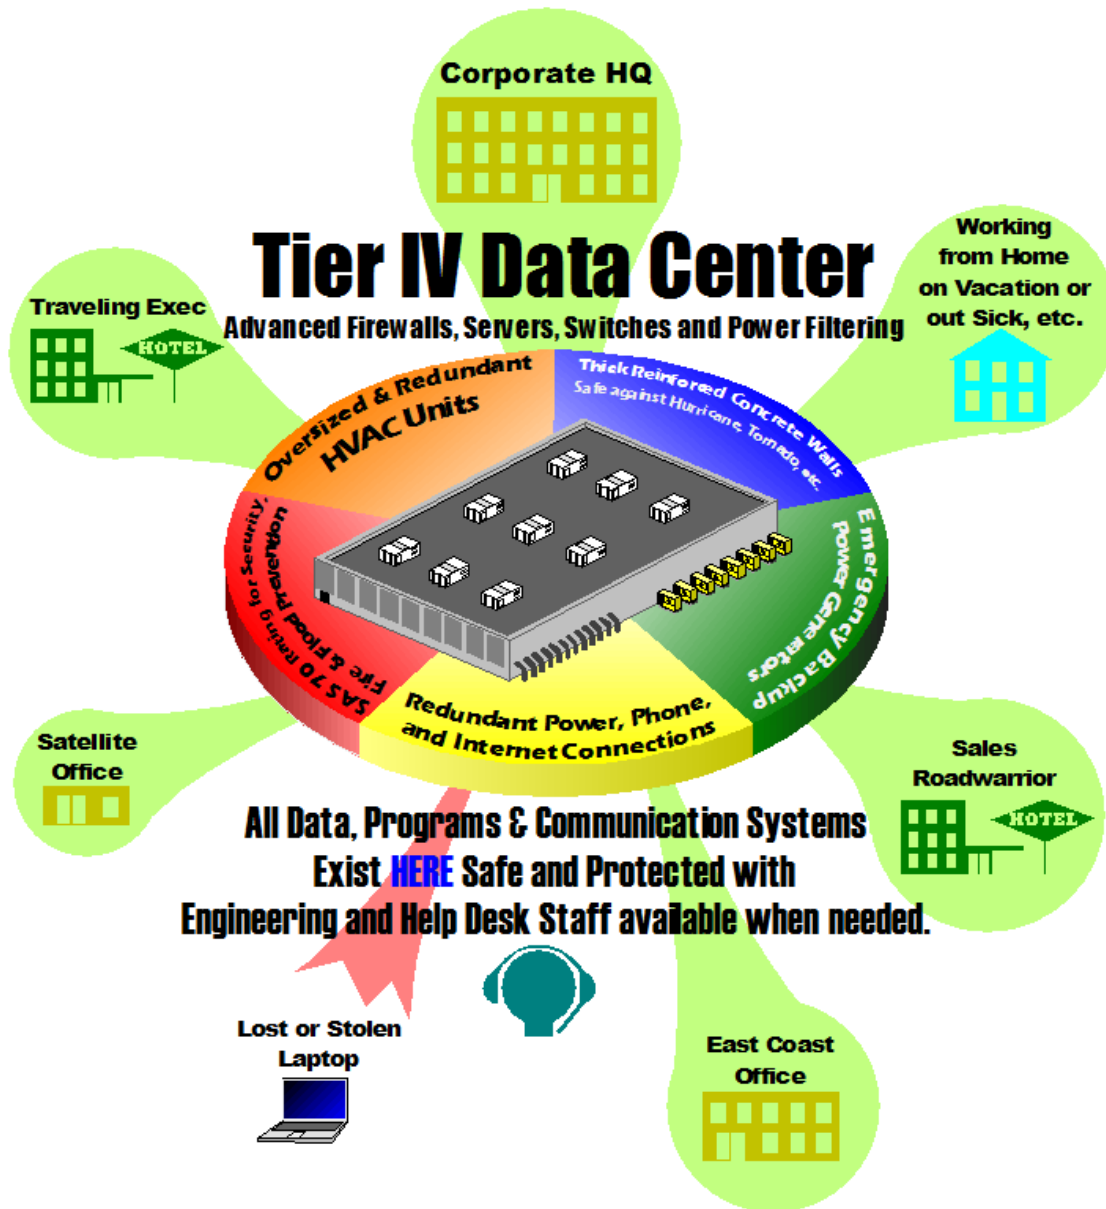

What is “the cloud”? Put simply, it’s moving a traditional “computer room” to a safer and more secure Data Center. However, not all Data Center’s are the same, and only a Tier IV Data Center can provide the protection and reliability to keep you in business 24/7/365.

MergerTree's Tier IV, SAS 70 DATA CENTER:

This allows ALL elements of your company to work through the Data Center from anywhere in the world – This is “The Cloud”.

"It's like having all of your company's critical data and programs in a bank or fortress at all times." Protected, backed up and available any time from anywhere.

Since no programs or data are stored on workstations, a lost or stolen laptop does not compromise your system. Without the access codes only your company employees have, the laptop is worthless to anyone else – making this system 100% compliant with HIPAA and Sarbanes-Oxley regulations.

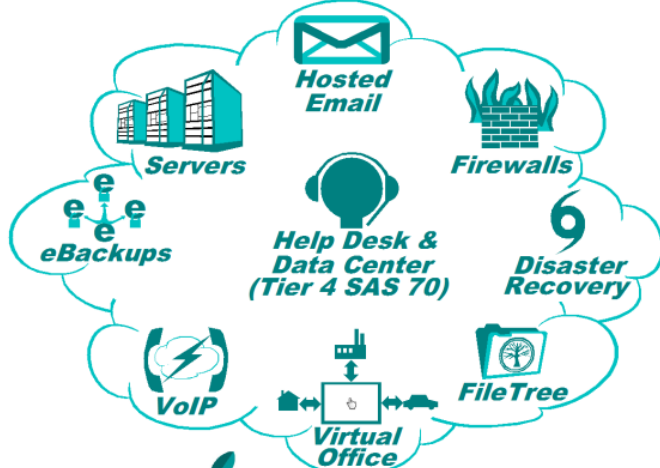

Help Desk and Engineering staff are on hand at all times, but ONLY WHEN YOU NEED THEM – keeping labor costs low and efficient.

MergerTree is ready to setup your company's cloud, which is simply the most efficient and reliable way to run your business. Add the MergerTree Unified Communication tool, and you'll never need to purchase a phone system, video conferencing, email or web conferencing tool again.

- **Latest Software** – Includes licensing to the latest Microsoft software versions whenever you're ready for them. Operating Systems, Word Processing, Excel Spreadsheets, Exchange and Outlook for Email, SharePoint for File Sharing...etc. As soon as it's available it's there for you, whenever you're ready to upgrade.
- **Latest Hardware** – Our Data Center has the latest virtual servers, virtual desktops, backup appliances, switches, firewalls, etc. – so you're always on the fastest and most advanced equipment on the market today.

We've been managing IT solutions for companies around the world for over ten years. Let us show you what MergerTree can do for you.
